# Chapter 1

## Namespace Index

### 1.1 Namespace List

Here is a list of all documented namespaces with brief descriptions:

<a href="#">default</a> . . . . .	<a href="#">5</a>
<a href="#">Rokfor</a> . . . . .	<a href="#">5</a>

# Chapter 2

## Data Structure Index

### 2.1 Data Structures

Here are the data structures with brief descriptions:

<a href="#">rokfor_DB</a>	<a href="#">7</a>
<a href="#">rokfor_MAIN</a>	<a href="#">26</a>
<a href="#">rokfor_TEMPLATES</a>	<a href="#">44</a>

## Chapter 3

# Namespace Documentation

### 3.1 default Namespace Reference

#### 3.1.1 Detailed Description

undocumented class

Author

Urs Hofer

### 3.2 Rokfor Namespace Reference

#### 3.2.1 Detailed Description

[rokfor\\_DB](#) class database access matching the logic of the pdf-engine This logic assumes the following structure: Project > Issue > Parts > Elements > Fields

Author

Urs Hofer

[rokfor\\_MAIN](#) class Main Functions of the [Rokfor](#) Interface

Author

Urs Hofer

## Chapter 4

# Data Structure Documentation

### 4.1 rokfor\_DB Class Reference

#### Public Member Functions

- [rokfor\\_DB](#) (\$rootdir=false, \$dbase=DBASE, \$dbuser=DBUSER, \$dbpass=DBPASS, \$dbname=DBNAME)
- [query](#) (\$q)
- [affected\\_rows](#) (\$q)
- [num\\_rows](#) (\$q)
- [insert\\_id](#) (\$i=false)
- [fetch\\_object](#) (\$link)
- [newSession](#) (\$user, \$pass)
- [checkSession](#) (\$id, \$dont\_update\_time=false)
- [getSessionId](#) ()
- [cleanSessionId](#) (\$id)
- [getUserName](#) ()
- [getUserGroup](#) ()
- [getUserId](#) ()
- [setUserRestriction](#) (\$\_state=true)

## Data Fields

- **\$db** = NULL
- **\$projects** = array()
- **\$activeProject**
- **\$editions** = array()
- **\$activeEdition**
- **\$parts** = array()
- **\$activePart**
- **\$elements** = array()
- **\$activeElement**
- **\$fields** = array()
- **\$data**
- **\$cache** = array()
- **\$activeSession**

- `$activeUsername`
- `$activeUsergroup`
- `$activeUserId`
- `$userRestriction`
- `$accessTable`

### 4.1.1 Member Function Documentation

#### 4.1.1.1 `_glueTableData ( $ _data )`

serializes 2d-array into `<:.....> / <:,,:,,,:>` form string

##### Parameters

string	<code>\$ _data</code>	
--------	-----------------------	--

##### Returns

void

##### Author

Urs Hofer

#### 4.1.1.2 `_splitClean ( $ _pattern, $ _string )`

`_splitClean` like `explode`, but cleans the final array from empty results

##### Returns

array

##### Author

Urs Hofer

#### 4.1.1.3 `_splitCloudData ( $ rawdata, $ xmin = -100, $ xmax = 100, $ ymin = -100, $ ymax = 100 )`

`_splitCloudData` - gets Data of a cloud, puts it into array and normalizes it

Data are stored in the database like this: `asd<:.....>60<:.....>65<:,,:,,,:>fsd<-:.....>122<:.....>71<:,,:,,,:>asdd<:.....>15<:.....>25<:,,:,,,:>`

**Returns**

array data[word=>array[x,y]]

**Author**

Urs Hofer

Frontend: Size of Cloud X

Frontend: Size of Cloud Y

**4.1.1.4 \_splitTableData ( \$ \_rawdata, \$ \_force\_col\_count = false )**

splits serialized table data into parts. with \$ \_force\_col\_count a number of columns can be forced, even if there is not enough data in the string. (creating empty cells)

**Parameters**

string	<i>\$ _rawdata</i>	
int	<i>\$ _force_col- _count</i>	

**Returns**

void

**Author**

Urs Hofer

**4.1.1.5 \_splitTextListData ( \$ \_rawdata )**

splits serialized multi field text string into parts

**Parameters**

string	<i>\$ _rawdata</i>	
--------	--------------------	--

**Returns**

void

**Author**

Urs Hofer

4.1.1.6 `_splitWordListData ( $ _rawdata )`

splits serialized string into parts

## Parameters

string	<code>\$ _rawdata</code>	
--------	--------------------------	--

## Returns

void

## Author

Urs Hofer

4.1.1.7 `addElement ( $ _contribname, $ _templateId, $ _chapterId = false, $ _issueId = false )`

[addElement\(\)](#) - adds an element (contribution) to the database if partId and editionId are not set, the active parts/editionId will be used

## Returns

id of the new contribution or false on error

## Author

Urs Hofer

4.1.1.8 `affected_rows ( $ q )`

`affected_rows`: wrapping `affected_rows` from the mysql-library

## Parameters

string	<code>\$q</code>	
--------	------------------	--

## Returns

query

## Author

Urs Hofer

**4.1.1.9** `checkSession ( $ id, $ dont_update_time = false )`

checkSession: returns 1 (ok), 0 (not valid), -1 (expired)

**Parameters**

int	<i>\$id</i>	
-----	-------------	--

**Returns**

int

**Author**

Urs Hofer

**4.1.1.10** `cleanSessionId ( $ id )`

deletes a session with a certain id

**Parameters**

int	<i>\$id</i>	
-----	-------------	--

**Returns**

void

**Author**

Urs Hofer

**4.1.1.11** `clearCache ( )`

clearCache - resets the data cache

**Returns**

void

**Author**

Urs Hofer

4.1.1.12 `fetch_object ( $ link )`

`fetch_object`: wrapping `fetch_object` from the `mysql-library`

## Parameters

<code>dblink</code>	<code>\$link</code>	
---------------------	---------------------	--

## Returns

object

## Author

Urs Hofer

4.1.1.13 `getCloudData ( $ fieldId, $ xmin = -100, $ xmax = 100, $ ymin = -100, $ ymax = 100 )`

`getCloudData` - gets id of a data-field, gets the data from the db and returns a split-cloud-array

## Returns

array data[word=>array[x,y]]

## Author

Urs Hofer

4.1.1.14 `getEditionIdbyEditionname ( $ name )`

Returns the edition id by Editionname

## Parameters

<code>int</code>	<code>\$id</code>	
------------------	-------------------	--

## Returns

object

## Author

Urs Hofer

**4.1.1.15** `getEditionInfo ( $ id )`

Returns the edition info by edition id

**Parameters**

int	<i>\$id</i>	
-----	-------------	--

**Returns**

object

**Author**

Urs Hofer

**4.1.1.16** `getEditionNamebyId ( $ id )`

Returns the edition name of an element (contribution) with id \$id

**Parameters**

int	<i>\$id</i>	
-----	-------------	--

**Returns**

object

**Author**

Urs Hofer

**4.1.1.17** `getEditions ( $ id = false, $ reset = false, $ status = ' open' )`

[getEditions\(\)](#) - gets all editions for a project with id = \$id and status = \$status

**Returns**

`$this->editions` or false on error

**Author**

Urs Hofer

**4.1.1.18** `getElements ( $ id = false, $ status = 'Close' , $ ed = false, $ templatename = false, $ order = false )`

`getElements()` - gets all elements (contributions) for a part within an issue of a project if \$id not set, uses \$this->activePart, if \$status not set uses 'Close'. If status = false neglects all status info. \$ed: edition-id (issue-id). if not set, the active edition set with setEditionActive will be used. \$order: "\_name ASC" or "\_newdate DESC" or "\_name ASC, \_moddate DESC" or false

#### Returns

\$this->parts or false on error

#### Author

Urs Hofer

**4.1.1.19** `getElementIdbyName ( $ name, $ templatename = false )`

`getElementIdbyName()` - returns the id of an element by name

#### Returns

\$int or false on error

#### Author

Urs Hofer

**4.1.1.20** `getElementNamebyId ( $ id = false )`

`getElementNamebyId()` - returns a name of an element by id

#### Returns

string or false on error

#### Author

Urs Hofer

**4.1.1.21** `getFieldData ( $ id )`

`getFieldData` - get data of a field with template infos \$id for a field is strictly required

Returned Data Object:

```
( [d_id] => Int [d_forelement] => Int [d_text] => String [d_binary] => String [d_integer]
=> Int [t_id] => Int [t_fortemplate] => Int [t_fieldname] => String [t_fieldtype] => String
[t_maxlines] => Int [t_textlength] => Int [t_imagewidth] => Int [t_imageheight] => Int
[t_cols] => Int [t_colnames] => String [t_history] => String [t_growing] => String [t-
len_influence] => String )
```

**Returns**

\$this->data

**Author**

Urs Hofer

**4.1.1.22 getFieldNamesByTemplateName ( \$ templatename )**

Return Field Names and Info by TemplateName

**Parameters**

string	<i>\$templatename</i>	
--------	-----------------------	--

**Returns**

void

**Author**

Urs Hofer

**4.1.1.23 getFieldsByName ( \$ fieldname, \$ elementId = false )**

getFieldsByName - returns the id of a field in an element/contribution by name

**Returns**

object

**Author**

Urs Hofer

**4.1.1.24 getFieldsByTemplateld ( \$ fieldid, \$ issue = false )**

getFieldsByld - returns all Data Fields with a certain (template) id of a defined issue (if set!)

**Author**

Urs Hofer

**4.1.1.25 getFieldsId ( \$ id = false )**

getFieldsId - gets id's of all data fields for an element. if \$id not set, uses the active-Element, otherwise the fields for Element with id = \$id if \$resolveForeign is false, no template infos are merged (which is way faster in big tables)

**Returns**

\$this->fields array of data-objects, false on error

**Author**

Urs Hofer

**4.1.1.26 getMatrixData ( \$ fieldId, \$ xmin = -100, \$ xmax = 100, \$ ymin = -100, \$ ymax = 100 )**

getMatrixData - gets Data of a Matrix, normalizes it and returns it as an array

**Returns**

array

**Author**

Urs Hofer

**4.1.1.27 getPartByName ( \$ name, \$ projectId = false )**

getPartByName: returns the id of a part according to its name

**Returns**

void

**Author**

Urs Hofer

**4.1.1.28** `getPartNamebyId ( $ id )`

Returns the part name of an element (contribution) with id \$id

**Parameters**

int	<i>\$id</i>	
-----	-------------	--

**Returns**

object

**Author**

Urs Hofer

**4.1.1.29** `getParts ( $ id = false )`

[getParts\(\)](#) - gets all parts for a project with id = \$id if \$id not set, uses \$this->active-Project

**Returns**

\$this->parts or false on error

**Author**

Urs Hofer

**4.1.1.30** `getProjectNamebyEditionId ( $ id )`

Returns the project name of an issue (edition) with id \$id

**Parameters**

int	<i>\$id</i>	
-----	-------------	--

**Returns**

object

**Author**

Urs Hofer

#### 4.1.1.31 `getProjectNamebyPartId ( $ id )`

Returns the project name of an part (chapter) with id \$id

##### Parameters

int	<i>\$id</i>	
-----	-------------	--

##### Returns

object

##### Author

Urs Hofer

#### 4.1.1.32 `getProjects ( $ reset = false, $ id = false )`

[getProjects\(\)](#) - Loads all current Projects into the array requires the \_books table

##### Returns

`$this->projects`

##### Author

Urs Hofer

#### 4.1.1.33 `getSessionId ( )`

`getSessionId`

##### Returns

int

##### Author

Urs Hofer

#### 4.1.1.34 `getSliderData ( $ fieldId, $ xmin = 0, $ xmax = 100 )`

`getSliderData` - gets Data for a Slider, normalizes the value, returns it.

**Returns**

int

**Author**

Urs Hofer

**4.1.1.35 getTemplateFields ( \$ id )**

returns all Field-Definitions of a certain Template Id.

**Parameters**

string	<i>\$id</i>	
--------	-------------	--

**Returns**

void

**Author**

Urs Hofer

**4.1.1.36 getTemplateNamebyId ( \$ id )**

Returns the template name of an element (contribution) with id \$id

**Parameters**

int	<i>\$id</i>	
-----	-------------	--

**Returns**

object

**Author**

Urs Hofer

**4.1.1.37 getTemplates ( \$ project = false, \$ part = false, \$ all = false )**

returns the Templates accessible for the user for the edition \$id if all=true, all templates will be returned

## Parameters

int	<i>\$id</i>	
-----	-------------	--

## Returns

array

## Author

Urs Hofer

## 4.1.1.38 getUserGroup ( )

getUserGroup

## Returns

string

## Author

Urs Hofer

## 4.1.1.39 getUserId ( )

getUserId

## Returns

int

## Author

Urs Hofer

## 4.1.1.40 getUsername ( )

getUsername

## Returns

string

## Author

Urs Hofer

#### 4.1.1.41 `getUserNameById ( $ id_or_name )`

returns the username by id. in case of a passed username, it will be checked and returned

##### Parameters

string	<i>\$id_or_name</i>	
--------	---------------------	--

##### Returns

void

##### Author

Urs Hofer

#### 4.1.1.42 `getWordlistData ( $ fieldId )`

getWordlistData - gets the Words of a wordlist and returns them in an array

##### Returns

array

##### Author

Urs Hofer

#### 4.1.1.43 `insert_id ( $ i = false )`

insert\_id: wrapping insert\_id from the mysql-library

##### Parameters

string	<i>\$i</i>	
--------	------------	--

##### Returns

void

##### Author

Urs Hofer

4.1.1.44 newSession ( *\$ user*, *\$ pass* )

newSession

## Parameters

string	<i>\$user</i>	
string	<i>\$pass</i>	

## Returns

## Author

Urs Hofer

4.1.1.45 num\_rows ( *\$ q* )

num\_rows: wrapping affected\_rows from the mysql-library

## Parameters

string	<i>\$q</i>	
--------	------------	--

## Returns

query

## Author

Urs Hofer

4.1.1.46 query ( *\$ q* )

query: wrapping query from the mysql-library

## Parameters

string	<i>\$q</i>	
--------	------------	--

## Returns

query

**Author**

Urs Hofer

**4.1.1.47 rokfor\_DB ( \$ rootdir = false, \$ dbase = DBASE, \$ dbuser = DBUSER, \$ dbpass = DBPASS, \$ dbname = DBNAME )**

constructor

**Returns**

void

**Author**

Urs Hofer

**4.1.1.48 setEditionActive ( \$ id = false )**

setEditionActive - Sets a pointer to an active edition

**Returns**

true, false on error

**Author**

Urs Hofer

**4.1.1.49 setElementActive ( \$ id = false )**

setElementActive - Sets a pointer to an active element within a part of an issue in a project

**Returns**

true, false on error

**Author**

Urs Hofer

**4.1.1.50 setFieldData ( \$ data, \$ id, \$ type )**

setFieldData sets the value of a field

**Parameters**

string	<i>\$data</i>	
int	<i>\$id</i>	
string	<i>\$type</i>	

**Returns**

void

**Author**

Urs Hofer

**4.1.1.51 setPartActive ( *\$id = false* )**

setPartActive - Sets a pointer to an active part within an project

**Returns**

true, false on error

**Author**

Urs Hofer

**4.1.1.52 setProjectActive ( *\$id = false* )**

setProjectActive - Sets a pointer to an active project requires \$this->projects set If \$id is passed, activate the project with id = \$id, \$id can also resemble the name of the Project Otherwise, activate first

**Returns**

true, false on error

**Author**

Urs Hofer

**4.1.1.53 setUserRestriction ( *\$\_state = true* )**

setUserRestriction restricts Projects / Issues / Contributions access only for the current activated user

**Parameters**

boolean	<i><code>\$_state</code></i>	
---------	------------------------------	--

**Returns**

void

**Author**

Urs Hofer

**4.1.1.54 showGroupRights ( *`$_group`* )**

returns the rights per group, does not store anything class wide

**Parameters**

int	<i><code>\$_userid</code></i>	
-----	-------------------------------	--

**Returns**

array

**Author**

Urs Hofer

**4.1.2 Field Documentation****4.1.2.1 \$accessTable****Initial value:**

```
array(  
    "Projects" => array(),  
    "Editions" => array(),  
    "Templates" => array()  
)
```

The documentation for this class was generated from the following file:

## 4.2.1 Member Function Documentation

### 4.2.1.1 `_br2nl ( $ text )`

`br2nl` - stripes out `<br[/]>` tags

#### Parameters

string	<i>\$string</i>	
--------	-----------------	--

#### Returns

void

#### Author

Urs Hofer

### 4.2.1.2 `_callFieldPostProcessor ( $ dataId, $ data )`

`_callFieldPostProcessor` calls the post processor function for a field stored in the database it dies if an error occurred in the executed code returns false if there's no code to execute for a field

Postprocessor have to return the same data structure as they get passed.

- For Images: a string (filename)
- For Integers: a int
- For Text-Fields: a string or an array

## Parameters

string	<i>\$dataId</i> :	Field ID
--------	-------------------	----------

## Returns

mixed *\$data* (processed or unprocessed if there's no callback code stored)

## Author

Urs Hofer

4.2.1.3 \_checkChildren ( *\$ \_args*, *\$ \_mode* )

checking if there are children in the tree with only one containing element

## Parameters

string	<i>\$ _args</i>	
--------	-----------------	--

## Returns

void

## Author

Urs Hofer

4.2.1.4 \_clean\_from\_rteditor ( *\$ fielddata* )

cleans a string from html data and specific codes which should not be part of the string in the database

## Parameters

string	<i>\$fielddata</i>	
--------	--------------------	--

## Returns

string

## Author

Urs Hofer

#### 4.2.1.5 `_die ( $ _err = 404 )`

prints the error page and dies

##### Parameters

string	<i>\$ _err</i>	
--------	----------------	--

##### Returns

void

##### Author

Urs Hofer

#### 4.2.1.6 `_log ( $ key, $ value )`

logs actions into the log-db.

##### Parameters

string	<i>\$key</i>	
string	<i>\$value</i>	
string	<i>\$user</i>	

##### Returns

void

##### Author

Urs Hofer

#### 4.2.1.7 `_pcre_error_decode ( )`

`_pcre_error_decode` decode regular expression errors and returns a fully qualified string

##### Returns

string

##### Author

Urs Hofer

#### 4.2.1.8 batchProcessorPost ( )

executing batch function stored in the database. batchpost is an associative array

##### Parameters

array	<i>\$validation</i>	
array	<i>\$batchpost</i>	

##### Returns

void

##### Author

Urs Hofer

#### 4.2.1.9 changeTemplate ( \$ \_contrib, \$ \_newTemplateId )

changes the template in the contribution.

##### Parameters

object	<i>\$ _contrib</i>	
int	<i>\$ _new-TemplateId</i>	

##### Returns

void

##### Author

Urs Hofer

#### 4.2.1.10 checkContribution ( \$ \_contrib )

checks the field datas of a contribution: right number of fields, right order, right field names. adds missing fields or deletes unused fields-

##### Parameters

object	<i>\$ _contrib</i>	
--------	--------------------	--

**Returns**

void

**Author**

Urs Hofer

**4.2.1.11 checkSession ( )**

checkSession: 1 (ok), 0 (not ok), -1 (expired)

**Returns**

int

**Author**

Urs Hofer

**4.2.1.12 cloneData ( \$ contribId, \$ fromId )**

clones the data from a contribution to the actual one

**Parameters**

string	<i>\$contribId</i>	
string	<i>\$fromId</i>	

**Returns**

void

**Author**

Urs Hofer

**4.2.1.13 cloneIssue ( \$ \_issueid, \$ \_newname )**

clone an Issue with the same properties, but a new name

**Parameters**

int	<i>\$_issueid</i>	
string	<i>\$_newname</i>	

**Returns**

void

**Author**

Urs Hofer

**4.2.1.14** `closeContribution ( $ contribId, $ action = 'Close' )`

set the state of a contribution to "Close" (default) or \$action

**Parameters**

int	<i>\$id</i>	
-----	-------------	--

**Returns**

void

**Author**

Urs Hofer

**4.2.1.15** `createBuffer ( )`

createBuffer: generates the html/xml output.

**Parameters**

boolean	<i>\$ajax</i>	
---------	---------------	--

**Returns**

void

**Author**

Urs Hofer

**4.2.1.16** `deleteFromBinary ( $ fieldId, $ imgId = false )`

deletes a subitem of a binary field

**Parameters**

int	<i>\$fieldId</i>	
int	<i>\$imgId</i>	

**Returns**

void

**Author**

Urs Hofer

4.2.1.17 `distiller ( $ _scriptname, $ _basedir, $ _issueid, $ _pluginid, $ _type, $ _mode, $ _sessionid, $ _distillerid )`

distiller: converts a whole issue into a pdf

**Parameters**

int	<i>\$ _issueid</i>	
int	<i>\$ _pluginid</i>	
string	<i>\$ _type</i>	
string	<i>\$ _mode</i>	
int	<i>\$ _sessionid</i>	

**Returns**

void

**Author**

Urs Hofer

4.2.1.18 `ExecuteVideoConversion ( $ _scriptname, $ _basedir, $ _sourcefile, $ _target )`

converts a video in a format which is compatible with the html 5 tag (ogg/theora or mp4)

**Parameters**

string	<i>\$ _scriptname</i>	
string	<i>\$ _basedir</i>	
string	<i>\$ _sourcefile</i>	
string	<i>\$ _target</i>	

**Returns**

void

**Author**

Urs Hofer

**4.2.1.19 getBrowser ( )**

returns a browser array

**Returns**

void

**Author**

Urs Hofer

**4.2.1.20 getController ( )**

getController: Translate Get-Parameters to Class Variables. Follows this syntax: Ajax|-Regular/Action/Parameter/Values[]

**Returns**

void

**Author**

Urs Hofer

**4.2.1.21 getLastmodifiedContrib ( )**

returns the id of the last modified contribution according to the log file.

**Returns**

void

**Author**

Urs Hofer

**4.2.1.22** `getLatestContrib ( )`

returns the id of the last added contribution of a user

**Returns**

int

**Author**

Urs Hofer

**4.2.1.23** `getNeighbourContrib ( $ action, $ currentId )`

get the contribution next or previous in the xml list

**Parameters**

string	<i>\$action</i>	(Next / Previous)
--------	-----------------	-------------------

**Returns**

void

**Author**

Urs Hofer

**4.2.1.24** `getOrder ( $ bookId )`

returns the Order stored in the logfile for an edition. if no config value is found, false is returned. false will trigger the default order (by id asc)

**Parameters**

string	<i>\$editionId</i>	
--------	--------------------	--

**Returns**

void

**Author**

Urs Hofer

4.2.1.25 `getProgress ( $ _progressKey )`

Prints the upload percentage as json value for further processing via javascript

## Parameters

string	<i>\$ _progress- Key</i>	
--------	------------------------------	--

## Returns

void

## Author

Urs Hofer

4.2.1.26 `newContribution ( $ _issueid, $ _chapterid, $ _contribname, $ _templateid )`

undocumented function

## Parameters

int	<i>\$ _issueid</i>	
int	<i>\$ _chapterid</i>	
string	<i>\$ _ contribname</i>	
int	<i>\$ _templateid</i>	

## Returns

void

## Author

Urs Hofer

4.2.1.27 `PDF2Image ( $ _page, $ _file )`

converts a page of a pdf to a png and directly returns it with the right header

## Parameters

int	<i>\$ _page</i>	
string	<i>\$ _file</i>	

**Returns**

void

**Author**

Urs Hofer

**4.2.1.28 postController ( )**

postController: do some action with the post data

**Returns**

void

**Author**

Urs Hofer

**4.2.1.29 rokfor\_MAIN ( )**

Constructor

**Author**

Urs Hofer

**4.2.1.30 saveCorrex ( \$ word )**

stores a word in the user dictionary

**Parameters**

string	<i>\$_word</i>	
--------	----------------	--

**Returns**

void

**Author**

Urs Hofer

#### 4.2.1.31 searchreplaceResults ( )

executing search replace. analyzing the post array:

```
Array ( [search] => Ich [replace] => Ich(?)Bin [searchrange] => issue [issues] => Array  
( [0] => 2 ) [fieldlist] => Array ( [0] => 2 ) [replaceaction] => 0 )
```

##### Returns

void

##### Author

Urs Hofer

#### 4.2.1.32 sendMail ( \$ \_to, \$ \_mailmesg, \$ \_subject = false )

Send a email to \$ \_to, with the message \$ \_mailmesg and the subject \$ \_subject

##### Parameters

string	\$ _to	
string	\$ _mailmesg	
string	\$ _subject	

##### Returns

void

##### Author

Urs Hofer

#### 4.2.1.33 setIssueState ( \$ \_issueid, \$ \_state )

changes the state of an issue (edition)

##### Parameters

int	\$ _issueid	
string	\$ _state	(open/closed)

##### Returns

void

**Author**

Urs Hofer

**4.2.1.34 showOtherUsers ( )**

shows all users logged in currently

**Returns**

void

**Author**

Urs Hofer

**4.2.1.35 storeData ( \$ \_currentContrib )**

Stores the content of the main form in the database The output is stored in a hidden iframe (multipart forms can only be submitted, not send by xhr)

**Parameters**

object	<i>\$ _current-Contrib</i>	
--------	----------------------------	--

**Returns**

void

**Author**

Urs Hofer

**4.2.1.36 storeOrder ( \$ bookId, \$ field, \$ order )**

stores the order of an edition in the logfile

**Parameters**

int	<i>\$editionId</i>	
string	<i>\$field</i>	(id, _newdate, _moddate, _name)
string	<i>\$order</i>	(asc, desc)

**Returns**

void

**Author**

Urs Hofer

**4.2.1.37 storeSystemSettings ( \$ \_mode, \$ \_id = false )**

stores the settings in the system tag \$\_POST['store'] contains the array of a popup table. Rows with \$\_POST['store'][0] == "added" are new. They contain in the last index the id of the cloned row.

**Parameters**

string	<i>\$mode</i>	
int	<i>\$id</i>	(has multiple purposes, general id of the parent data, e.g. _forbook id)

**Returns**

void

**Author**

Urs Hofer

**4.2.1.38 transformFormFields ( \$ contribld )**

transforming the old form field id's to new ones for the save as function

**Parameters**

int	<i>\$contribld</i>	
-----	--------------------	--

**Returns**

void

**Author**

Urs Hofer

**4.2.1.39 trashContribution ( \$ contribld )**

deletes a contribution and all its data

**Parameters**

int	<i>\$id</i>	
-----	-------------	--

**Returns**

void

**Author**

Urs Hofer

**4.2.1.40 treeXML ( \$ \_mode, \$ \_args = null )**

treeXML: Putting XML Code for mootree together, store active project state (open book/issue/chapter/contrib)

**Parameters**

string	<i>\$ _mode</i>	("Current" "Archive")
int	<i>\$ _level</i>	(1:Book 2:Issue 3:Chapter 4: Contributions)
int	<i>\$ _choice</i>	(1:Book 2:Issue 3:Chapter 4: Contributions)

**Returns**

string

**Author**

Urs Hofer

**4.2.1.41 UDBAccess ( \$ \_file )**

returns a file from the udb repository if the access is okay

**Parameters**

string	<i>\$ _file</i>	
--------	-----------------	--

**Returns**

void

**Author**

Urs Hofer

#### 4.2.1.42 updateSessionVars ( *\$ \_currentContrib* = false )

Updating the session Variables, if no parameter is passed, unset the current contrib

##### Parameters

object	<i>\$ _current-Contrib</i>	
--------	----------------------------	--

##### Returns

void

##### Author

Urs Hofer

#### 4.2.1.43 Video2Gif ( *\$ \_movie*, *\$ \_movie\_get* = false )

converts a video file to an animated gif sequence

##### Parameters

string	<i>\$ _movie</i>	
--------	------------------	--

##### Returns

void

##### Author

Urs Hofer

#### 4.2.1.44 Video2HTML5 ( *\$ \_file* )

triggers a video conversion

##### Parameters

string	<i>\$ _format</i>	
string	<i>\$ _file</i>	

##### Returns

void

**Author**

Urs Hofer

### 4.3.1 Member Function Documentation

#### 4.3.1.1 `__spellCheckWord ( $ word )`

spell Check Call Back Function

##### Parameters

string	<i>\$word</i>	
--------	---------------	--

##### Returns

void

##### Author

Urs Hofer

#### 4.3.1.2 `_Bild ( $_f )`

Image Renderer

##### Parameters

fieldobject	<i>\$_f</i>	
-------------	-------------	--

**Returns**

void

**Author**

Urs Hofer

**4.3.1.3    `_ConvertInfluenceArray ( $ _inf, $ _f )`**

Returns the somehow quirky influence array in a correct javascript array notation. the string has the form of factor%%%%fieldname<:.....>...

**Parameters**

string	<code>\$ _inf</code>	
string	<code>\$ _contrib</code>	

**Returns**

void

**Author**

Urs Hofer

**4.3.1.4    `_domready ( $ script, $ flush = false )`**

`_domready` adds javascript to the domready part of mootools. if flush is set, the code will be returned.

**Parameters**

string	<code>\$script</code>	
--------	-----------------------	--

**Returns**

void

**Author**

Urs Hofer

**4.3.1.5    `_FilePicker ( $ _f )`**

undocumented function

## Parameters

fieldobject	<i>\$_f</i>	
-------------	-------------	--

## Returns

string

## Author

Urs Hofer

4.3.1.6 `_getEngine ( $ _plugin )`

parses the plugin name and returns the generator-engine

## Parameters

string	<i>\$ _plugin</i>	
--------	-------------------	--

## Returns

void

## Author

Urs Hofer

4.3.1.7 `_mark_search_results ( $ searchstring, $ _datatext )`

mark all found appearances of a search string in a text with markers searchstring is urlencoded

## Parameters

string	<i>\$search-string</i>	
string	<i>\$ _datatext</i>	

## Returns

string

## Author

Urs Hofer

#### 4.3.1.8 `_parseLegends ( $ string, $ field = false )`

parsing legends string (deriving from variomat field)

##### Parameters

string	<i>\$string</i>	
--------	-----------------	--

##### Returns

array

##### Author

Urs Hofer

#### 4.3.1.9 `_prepare_for_rtfediting ( $ fielddata )`

prepares raw text for rtf editing.

##### Parameters

string	<i>\$fielddata</i>	
--------	--------------------	--

##### Returns

string

##### Author

Urs Hofer

#### 4.3.1.10 `_spellCheck ( $ string )`

Spell Check Initialization

##### Parameters

string	<i>\$string</i>	
--------	-----------------	--

##### Returns

void

**Author**

Urs Hofer

**4.3.1.11    \_targetMatrix ( \$ \_f )**

targetMatrix: automatic-cinema widget (used to define narrative targets)

**Parameters**

dataobject	\$ _f	
------------	-------	--

**Returns**

string

**Author**

Urs Hofer

**4.3.1.12    \_text ( \$ \_f )**

Text Renderer

**Parameters**

fieldobject	\$ _f	
-------------	-------	--

**Returns**

void

**Author**

Urs Hofer

**4.3.1.13    \_timeMatrix ( \$ \_f )**

timeMatrix: automatic-cinema widget (used in style definition)

**Parameters**

dataobject	\$ _f	
------------	-------	--

**Returns**

string

**Author**

Urs Hofer

**4.3.1.14     TypologyCloud ( \$ \_f )**

Cloud Widget

**Parameters**

dataobject	\$ _f	
------------	-------	--

**Returns**

string

**Author**

Urs Hofer

**4.3.1.15     TypologySelect ( \$ \_f )**

Typology Selector renderer

**Parameters**

fieldobject	\$ _f	
-------------	-------	--

**Returns**

void

**Author**

Urs Hofer

**4.3.1.16     Zahl ( \$ \_f )**

Below here are the field renderers Numbers Renderer: Wenn in der Definition (col-names) "integer" steht, wird \*KEIN\* Datum-Selector ausgegeben.

## Parameters

fieldobject	<i>\$_f</i>	
-------------	-------------	--

## Returns

void

## Author

Urs Hofer

4.3.1.17 baseframe ( *\$\_user* = "user", *\$\_username* )

prints the baseframe. this is the general layout of all div's and elements used to fill in the gui with ajax functions

## Parameters

string	<i>\$_user</i>	
string	<i>\$_username</i>	

## Returns

void

## Author

Urs Hofer

## 4.3.1.18 bookSorting ( )

returns the book-sorting form (no output/just return) in the settings tab

## Returns

string

## Author

Urs Hofer

## 4.3.1.19 context ( )

prints the context menu buttons

**Parameters**

string	<i>\$_contribid</i>	
--------	---------------------	--

**Returns**

void

**Author**

Urs Hofer

**4.3.1.20 displayInfo ( )**

Display Information depending on the POST array

**Returns**

void

**Author**

Urs Hofer

**4.3.1.21 domready ( )**

prints the domready scripts

**Returns**

void

**Author**

Urs Hofer
